Efficient Manufacturing Solutions

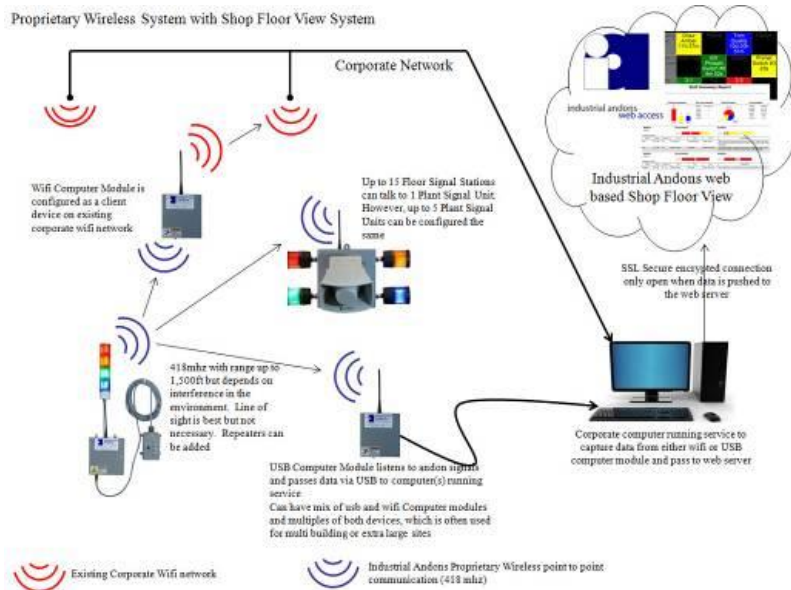

## What's an Andon?

An Andon is a visual and audible response notification tool that falls under the lean pillar of Jidoka, which is comprised of various combinations of lights and sounds. When production personnel or equipment have any issue on the floor, they simply turn on the Andon to signal for help. Once the system is turned on, the lights and sounds alert the support personnel who can quickly address the problem.

An Andon promotes visual factory and serves two goals. First, it enables the production personnel to remain at their workstation when they have an issue. Second, it reduces response time and more efficiently gets the support personnel to the line where they are needed to get the line back up and running.

Proprietary Wireless System with Shop Floor View System

Andon systems are necessary to ensure that your manufacturing or assembly facility is lean and efficient. While Andon Systems have been used for years to promote efficiency within manufacturing and assembly facilities, Industrial Andons, LLC provides a patented wireless system and method to make installing and using an Andon System easier, more flexible, and more affordable than ever before!
